

Short description

BS 05DU-h 型磁场源在其尖端产生直径大约为几毫米的微小磁场。它的工作原理如同耦合钳，能够将干扰电流有选择地耦合到单个导体、IC引脚、组件以及细线（扁平带状线缆）。

The field source is powered by an EFT/ burst generator. The generator is connected to the 4.4 kV, high-voltage resistant SMB plug of the field source via a high-voltage cable (HV SMB 1m or SMB-BNC 1 m).

BS 05DU-h

磁场源

Application with BS 05DU
