

SF 21

Demo Board Immunity E-field

Short description

The SF 21 demo board is a board on which interference effects such as burst and ESD due to E-field are demonstrated.

The interference can be generated e.g. with burst generators, ESD generators, the E1 Immunity Development System and field sources from Langer EMV-Technik GmbH and thus illustrate their operating principle.

Technical parameters

Supply voltage	12 V
Current input	ca. 20 mA
Sizes (L x W x H)	(140 x 100 x 23) mm
