### RF-E 02 E-Field Probe 30 MHz up to 1.5 GHz

### Short description

The RF-E 02 near-field probe detects electrical fields that are decoupled from bus structures, larger components or supply surfaces. The electrode surface on the underside of the probe tip is approx.  $2 \text{ cm} \times 5 \text{ cm}$ . The probe functions best within distances of 1 cm - 2 cm from the component.

The RF-E 02 is a passive near-field probe. In principle it has the same structure as the RF-E 05 and RF-E 10 probes. When measuring, the bottom surface of the probe head is positioned close to the measured object. This allows the Efield emitted by an assembly to be detected. To achieve a higher resolution, only the tip of the probe head should be held toward the measured object. The near-field probe is small and handy. It has a current attenuating sheath and, therefore, is electrically shielded. It can be connected to a spectrum analyzer or an oscilloscope with a 50  $\Omega$  input. The H-field probe does not have an internal terminating resistance of 50  $\Omega$ .

#### Technical parameters

Frequency range	30 MHz - 1.5 GHz
Probe head dimensions:	≈ (23 x 53) mm
Connector - output	SMB, male, jack

#### Frequency response [dBµV] / [dBµV/mm]

# RF-E 02 E-Field Probe 30 MHz up to 1.5 GHz

## E- field correction curve [dB $\mu$ V/mm] / [dB $\mu$ V]

### Measuring principles

# RF-E 02 E-Field Probe 30 MHz up to 1.5 GHz
