

ICEM Field

Measurement service for IC Emission Measurement using Field Coupled Analysis

LANGER
EMV-Technik

Short description

The ICEM Field measurement service determines the respective near fields, that are decoupled by the test IC in function, by means of separate magnetic and E-field sources. The ICEM Field measurement service is a further investigation to the tests according to IEC 61967 (TEM or IC stripline). The measurement results help the developer to be able to give an assessment of the emission of an IC separately according to the field type.
