

Short description

Langer EMV-Technik GmbH offers a workshop for the handling of Langer scanners. Our development engineer will explain to you the construction and commissioning of a Langer scanner, the installation and operation of the software and the execution of a scan. Afterwards you will perform a test scan together. Following this, you will scan a DUT (or your own if previously agreed upon) with the help of our development engineer and learn how to evaluate the scan.

We will be happy to conduct the workshop on your premises. Please contact us.
